

Henri Linke

I design and ship applied AI tools (RAG, agents, business apps) that deliver lasting productivity gains — from spec to deployment, end to end.

IMPACT & KEY ACHIEVEMENTS

RAG chatbot & documentation
KerAwen • 2025 – 2026

Customer portal (DocuSaurus) synced from Notion, Typesense search + RAG assistant with source citations (Qdrant, OpenAI) — architecture and VPS/Coolify deployment owned end to end.
→ [Demo: support.kerawen.com](#)

Multi-store inventory SaaS
KerAwen • 2026

Multi-company inventory SaaS (Django, PostgreSQL) built and shipped alone under a tight deadline: roles & permissions, automated tests, production deploy.
Result: the application closed the deal with a major client.

PrestaShop POS test automation
KerAwen • 2025 – 2026

Automated functional tests for the PrestaShop POS module (Python, Playwright): reproducible compliance evidence, full ownership of the test track.
Result: direct contribution (test workstream — blocking criterion) to NF525, the French POS regulatory certification.

PROFESSIONAL EXPERIENCE

AI & Innovation Engineer
KerAwen (POS vendor)

03/2025 – present

→ End-to-end ownership of production AI products and business applications: scoping, technology choices, delivery.
→ Agents and MCP wired to internal tools (Notion); “use AI only when it pays off” scoping.
→ Upskilled colleagues on practical AI use; industrialization (tests, CI/CD, deploy).

Personal R&D — Multi-agent orchestration

2026

→ 4 specialized agents orchestrated with LangGraph, producing automated financial analyses (VaR, Sharpe, drawdown).

Independent study — Generative AI

04/2024 – 02/2025

→ Self-directed work and watch on LLMs and RAG, to stay current in a fast-moving field.

Big Data Developer — Capgemini
(apprenticeship)

09/2021 – 08/2023

→ Built pipelines for collecting, analyzing and reporting agricultural data (Spark, NiFi, HDFS) — French Agency for Services and Payments.
→ Automated data quality controls; agile delivery with CI/CD pipelines.

WHAT I BRING

- In small teams I own a topic through to production — no dedicated team behind me.
- Data and delivery craft from structured teams; generative AI followed from the start of the field.

TECHNOLOGIES & METHODS

Python Django FastAPI

LangChain / LangGraph

RAG / MCP / OpenAI API

Qdrant / Typesense

TensorFlow / scikit-learn / MLflow

Playwright / Pytest

PostgreSQL / Redis Docker

GitHub Actions n8n

Linux VPS / Coolify

PrestaShop Spark

EDUCATION

AI Engineering degree (Master's level, RNCP 7) — CentraleSupélec / OpenClassrooms (2021 – 03/2024)
L3 MIASHS (Bachelor's 3rd year, Maths & CS) — UBO (2019 – 2020)
CPGE intensive maths & physics — Brest (2015 – 2018)

LANGUAGES

French — native
English — professional working proficiency (B2)
